

**PROCEEDINGS OF THE THIRD
SEDE BOGER SYMPOSIUM ON
SOLAR ELECTRICITY PRODUCTION
6-7 MARCH 1988**

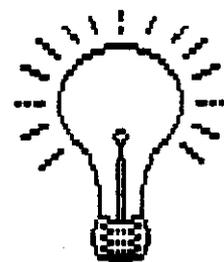

**Editor
D. FAIMAN**

Organized by:

**The Applied Solar Calculations Unit
The Jacob Blaustein Institute for Desert Research
Ben-Gurion University of the Negev**

Under the Patronage of

**Ben-Gurion University of the Negev
The Blaustein International Center for Desert Studies
The International Solar Energy Society (Israel Section)
The Institute of Electrical & Electronics Engineers (Israel Section)
The Israel Ministry of Energy & Infrastructure
The Israel Electric Corporation Ltd.
Luz Industries Israel Ltd.
Petroleum Services Ltd.**

INTRODUCTION

This volume of proceedings contains the full texts of the presentations delivered by our three keynote lecturers: Jan Kreider from the University of Colorado, Fred Treble of the European Economic Community and Roland Winston from the University of Chicago. Appended to each of these three lectures is a transcription of the pertinent issues that emerged from the ensuing discussions. These discussions were tape recorded at the time and, where possible, the name of the questioner is given in the present transcription. Our apologies are offered, however, to those speakers - rendered anonymous - whose voices we were unable to identify.

In addition to the keynote lecturers from abroad, the symposium organizers invited a number of over-view report lectures from our colleagues at home. Full texts were provided by Luz Corporation (presented by Yoav Gilon) and by the Weizmann Institute central receiver group (presented by Michael Epstein). These texts appear in the present volume. Summaries of the valuable over-views by Dr. Pinhas Glueckstern of the Ministry of Energy and Infrastructure and by Dr. Dan Weiner of the Israel Electric Corporation are included only in the form of photocopies of the transparencies they used.

The final section of these proceedings contains the extended abstracts provided by those participants who presented posters.

This third Sede Boqer symposium in our annual series was made possible by the generous support of: The Blaustein International Center for Desert Studies, The Israel Section of the Power Engineering Chapter of IEEE, The Israel Ministry of Energy and Infrastructure, The Israel Electric Corporation, Luz Industries (Israel) Ltd, and Petroleum Services Ltd. To the various individuals in these organizations who were involved in making this funding available we offer our appreciation for their kindness and understanding.

The Applied Solar Calculations Unit
June 1988

- "Development of Alternative Energy Sources in Israel"
PINHAS GLUECKSTERN,
(Ministry of Energy and Infrastructure).....[9]
- "Progress Report on the PV Program"
DAN WEINER
(Israel Electric Corporation, Haifa)[25]
- "80 MW Solar Project, Advantages Over a 30 MW Solar Plant"
MICKY MARGALITH
(Luz Industries Ltd., Jerusalem)[39]
- "Design of Molten Salt Direct Absorption Receiver for Solar
Thermal Conversion"
MICHAEL EPSTEIN and MORDEHAI HALMANN
(Weizmann Institute of Science, Rehovot).....[47]
- "Performance of a Large Solar-Thermal Electric Power Plant
in the USA"
JAN F. KREIDER
(University of Colorado, Boulder, Co. USA)....[53]
- "Experience with Photovoltaic Pilot Plants in Europe"
F.C. TREBLE
(Farnborough, Hants, United Kingdom)[89]
- "Novel Optical Methods for Increasing the Power Output of
Solar Conversion Systems"
ROLAND WINSTON
(University of Chicago, Chicago Illinois, USA).....[111]
- "Solar Energy for Hydrogen Production"
NAAMAN BEN-AHARON
(M.A.S.H. Ltd., Beer-Sheva)[137]
- "Method of Improving the Performances of Polycrystalline Si
Solar Cells"
S. ELIAHU, M. MUDRIK and N. CROITORU
(University of Tel Aviv, Ramat Aviv, Tel Aviv)[143]
- "Triangular Photovoltaic Modules for Polar-Axis Trackers"
DAVID FAIMAN
(Applied Solar Calculations Unit, Jacob Blaustein Inst. for
Desert Research, Ben Gurion Univ., Sede Boqer)[149]
- "A Multipyranometer Method for Measuring the Solar Radiation
Components: First Results"
D. FAIMAN, D. FEUERMANN, P. IBBETSON and A. ZEMEL
(Applied Solar Calculations Unit, Jacob Blaustein Inst. for
Desert Research, Ben Gurion Univ., Sede Boqer)[155]

"Amorphous Silicon Solar Cells: Thermodynamic Models for Realistic Performance Characteristics

LUUK FOLKERTS and J.M. GORDON

(Applied Solar Calculations Unit, Jacob Blaustein Inst. for Desert Research, Ben Gurion Univ., Sede Boqer)[159]

"Optimized Design of a Second Stage Nonimaging (CPC) Concentrator for the Solar Thermochemical Pipe Project at the Weizmann Institute's Central Receiver Facility"

J.M. GORDON [1], G. INGEL [2] and M. LEVY [2]

(Applied Solar Calculations Unit, Jacob Blaustein Inst. for Desert Research, Ben Gurion Univ., Sede Boqer [1] and Weizmann Institute of Science, Rehovot [2]).....[165]

Standards for Energy Efficiency Definition for Solar Power Facilities"

AHARON ROY

(Dept. of Chemical Engineering, Ben Gurion Univ. of the Negev, Beer-Sheva)[171]
